

PhD and post-doc positions available in Tübingen (Research: Neurobiology of memory in children)

Phd and post-doc positions are currently available for psychologists/neuroscientists at the Institute of Medical Psychology and Behavioral Neurobiology (Prof. Dr. J. Born) of the University of Tübingen (Germany). The research group focuses on the impact of sleep on memory consolidation during childhood.

We offer the opportunity to work with eye tracking, functional imaging, EEG/MEG and event-related-potentials. You will become a member of an interdisciplinary, motivated and friendly team, which conducts internationally recognized research at the highest level.

We expect experience in conducting and analysing biopsychological studies (optimally methodological skills in imaging techniques and ERP) and/or in conducting research on children and infants. Experience in the field of memory research would be an advantage. Interest in a career in science and in preparing scientific publications is necessary. Very good English skills, firm statistical knowledge and a scientific way of working are required.

Please send an email with your application including a complete CV, certificates and names and contact information of two referees to gordon.feld@uni-tuebingen.de.
